Baking Powder Figures THAT DON'T LIE!

The Royal Baking Powder Co. try to give the inference that their powder contains more Cream Tartar and that its Leavening Power is greater than any other made, as stated in their advertisement on the "Comparative Worth of Baking Powders," exhibited by black lines.

DR. COLLIER'S ANALYSIS. U. S. DEPT. OF AGRICULTURE. WASHINGTON D. C., March 10, 1883. C. E. ANDREWS & Co.—Gentlemen: I received by express from Thos. Lydon and J. P. Harfins & Co., Grand Ave., Milwaukee, and Harper Bros., Chicago, Ill., samples of Andrews' Pearl and Royal Baking Powders.

Government Chemist Collier's Analysis as to the Leavening Qualities.

No wonder the Royal Co. omitted Andrews' Pearl from their "Comparative List," as Government Chemist Collier's analysis shows conclusively two things: 1st, That Andrews' Pearl contains more Cream Tartar than the Royal, as shown by the cuts above; 2d, That the Leavening Power of Andrews' Pearl is greater than the Royal, as shown by the two black lines above.

CHALLENGE.

We will give the Royal Co. or any one else \$1,000 or \$5,000 if they can prove by any fair method test that Andrews' Pearl Baking Powder does, or ever did, contain alum or any injurious substances, and this challenge is open forever.

THE CHOLERA GERM.

About Dr. Koch's Recent Remarkable Discoveries.

A Calcutta letter says: There is good reason to believe that the visit to Calcutta of the German cholera commission has been fruitful of a very important discovery. The investigations made by the commission in Egypt last year had already indicated the existence in all true cases of cholera of a peculiar microscopic parasite, or bacillus, as it is termed in medical language.

HOW CLEVELAND GOT IT.

In 1882 you were candidate for Governor of the great State of New York. You were nominated as a reform candidate; your friends took special pains to impress upon independents and reformers that, if elected, practical politics and machine methods would find no place in your administration.

THE CHOLERA GERM.

From a further discovery made by the commission in Calcutta, there is no reason to believe that the relation of parasite to the disease is one of cause; in short, that the parasite is the long-sought-for cholera germ. While the commission was in Calcutta a sporadic outbreak of cholera of great intensity occurred in the native quarter of the town, in the neighborhood of a dirty tank or pond.
