to easily. I believe that hard-wood tiles would stand the frosts at home; and if so, they constitute the best roofing. My house has no joists. All the floors are of tiles resting on arches. One of these arches was made over a room twenty feet square, by four and a half inch diameter tiles.

The following is from Prof. Hayden's article on the Yellowstone, in the February number of Scribner's. This article is the second in a series on "The Wonders of the West."

From the river our path led up the steep sides of the hill for about one mile, and in a little while we reached the summit in full view of the springs. This wonderful scene, our whole company agreed, surpassed all the descriptions which had been given by former travelers.

At the end of an hour we were surprised to find ourselves in the presence of the mountain side. The upper portion is about one thousand feet above the waters of Gardiner's River. The surface covered with the deposits comprises from three to four square miles. The springs now in active operation cover an area of about one square mile, in the form of a series of basins, some of which are as large as a city block.

The water after rising from the spring basins flows down the sides of the declivity, step by step, from one reservoir to the other, at each one of them losing a portion of its heat, until it reaches the main channel, which is within fifty hundred feet of its source our large party camped for two days by the side of the little stream formed by the aggregated waters of these hot springs, and we found the water most excellent for drinking.

OUR COUNTY SCHOOLS.

Hon. Orval Hofstad, Sup't of Public Instruction.

Sir:—In compliance with the requirements of your department I respectfully submit herewith a report on the condition of the public schools under my supervision.

The year as a whole has been one of harmony and success. As a rule both the teachers and scholars have co-operated in the work of the schools.

The evidence of actual progress is indicated in many ways. By the fact that the work of the schools has been more judicious, energetic and efficient; by an increased enthusiasm, visible in the studios habits and correct deportment of their pupils, giving the surest and most satisfactory evidence that a good work is being performed.

The fact and figures above do not show any material change from those of last year. The average time taught in each district has been increased only two days.

Of the 188 teachers who taught the winter term in the rural districts, 98 boarded around, 59 read the Bible in school, 21 opened school with prayer, 48 practiced singing in school, 20 subscribed for and read Educational Journals, and 23 taught their first term.

Under our present law one of the most important duties of the district board is to determine and prescribe a uniform series of text-books to be used in the schools.

I have visited during the year 222 schools, spending with me on an average one-half day in each. The work performed in visiting these schools has varied with their varying conditions—that of arousing both teacher and pupil to a more vigorous and efficient work.

Our schools need more frequent visiting. Inspection, intelligent oversight and direction, is as needful for the school as for the factory.

What would be thought of a merchant who employed a clerk or a salesman, sent him to his store and never so much as looked in upon him for weeks and months, and sent an agent to visit him for a few hours once or twice a year?

The whole number of children in the county between the ages of 6 and 21 years is 13,003. Of this number 10,091 were taught some portion of the year by the educational force of the county, which consists of 233 teachers, one hundred and twenty-nine of whom come from the district of the County Superintendent.

taught by males, 466 1-4; by females, 1405. Number of months taught in the rural districts by males, 324; by females, 820 1-2.

The total amount paid teachers wages during the year, \$62,764; amount paid to school teachers, \$27,495; paid to rural teachers, \$35,269. The average monthly wages paid males in the rural districts, \$11,078; paid females, \$15,745.

The total amount raised in the county for all school purposes during the year was \$134,919, being an excess over that of last year of \$21,576. Making \$10,488 per capita for each child of school age in the county.

Of the 188 teachers who taught the winter term in the rural districts, 98 boarded around, 59 read the Bible in school, 21 opened school with prayer, 48 practiced singing in school, 20 subscribed for and read Educational Journals, and 23 taught their first term.

comparison of the interest and work of the different schools in the county during the last three years.

Our Union and Graded Schools were never in a more prosperous condition than at the present time. They are filled to overflowing, and without a single exception are organized with an able, thorough, and earnest corps of teachers.

The people of Washtenaw are beginning to realize the importance of the education of their children. The school-houses indicate the educational prosperity of the people; that children love and properly appreciate their school only when the school-houses are good.

Some are positively opposed to it, others believe in it, and approve of it when applied to their neighbor's child. They are of the opinion that school training is of but little account unless a certain amount of judicious whipping is used as a stimulant to hard and successful study.
