VOLUME XXX.

ANN ARBOR, MICHIGAN, FRIDAY, APRIL 16, 1876.

LOVES MEMORIES.

One day, in pensive, dreamy mood, I thought of bygone days. How fair she was, how sweet and good, how full a treasured fragrant curl.

The clinging curl was soft and bright, yet her brow was not golden. Her hair faded not like the curl; it caught the color of old.

Then came a thought of sudden pain: How now her hair so sunny? Was wavy, soft, yet always plain. Not curled at all. How funny?

Young Moll's Peavy. Villate's "drive" of logs had jammed at the foot of the rapids. In the early throat of the main "pitch," where the Aux Lieres falls over the ledges into the "glut-hole," fifty feet below.

There was among us a youngster whom the old drivers called "Young Moll's Peavy." Young Moll was a half-breed (French and Indian) girl, or rather woman at this time, of thirty or thirty-two.

"I shall have to go myself," Villate said. "I will go myself, for as I am!" When bashfully, as if afraid of giving offense, young Lotte said he would go.

The season of wonderful fish and bird and snake stories is fairly inaugurated, and as the season is fairly inaugurated, Pacific slope, with its big trees and its big vegetables and fruits, produces also the prize zoological romances.

The Pumpkin.

The pumpkin is a large, yellow fruit, about one foot in diameter, and not far from being round.

The seed is inserted into the ground about the 15th of May, and cums to the light in about 6 days.

The most remarkable thing about the pumpkin is the way that it grows. Each apple-bodied pumpkin has from 6 to 8 ribs in them, and there isn't a food, ancient or modern, can outstyle them.

Prof. Stork and Population. Prof. Stork Rogers, of Oxford University, England, has made up a curious return of the proportion of domesticated live stock to population in the most populous countries in the world.

There are as many sheep as there are Norwegians in Norway, when they are all at home, and two and one-half of them—the Norwegians—are entitled to a pig each.

There is no hesitation, no beating about the bush; Mr. Moody's earliest reprint is an admirable one.

The Fashions.

The present fashionable bonnet is simply a large hat with flowing trim, and upon it and inside of its upward front rests a conservatory of flowers.

Each of these flowers means a pumpkin. The pumpkin keeps on being growing until the first day of October, and then gives up the contest.

PERSONAL.

The Boy on Labrosse Street. When a Labrosse street boy is playing "hop-scotch" on the walk and his mother comes to the door and asks him to split along in a few minutes, he replies, "At the end of ten minutes she opens the door and says: 'Wilyum, I want that wood!'"

Loss by Weeds and Insects. It is estimated that the value of produce annually raised in this country is \$2,500,000,000, of which amount nearly or quite one-fifth, or \$500,000,000, is lost, not counting the amount of insects, from the attacks of injurious plants and animals.
