BLACKBERRIES AND KISSES.

Blackberries! ripe blackberries! Will you come and see?
Over all the woods and lanes
They are running free.

Famed for beauty, love, or song,

Join the company.

Sing and eat, and eat and sing, While the children shout; And fond lovers 'mong the vines Wander in and out— Wander slowly, stooping low, Lest the fruit they miss: Ah! I wonder which is sweetest,

Berries, or a kiss? Which is sweetest, merry Robin?
Tell me which is best.?
And he warbled, "Blackberries!
Berries for my nest."
Which is sweetest, happy lovers,
Happy as you sigh?"
Laughing low, they answered me,
"You had better try."

"Children, who in purple juice
Dye your finger-tips,
Purple are your garments dyed,
Purple are your lips,
Through the woods and lanes and fields
Each a welcome guest,
Can you answer what I ask?"
"Blackberries are best!"

"Blackberries, of course, are best; Who would kisses want?" Said a sturdy, laughing lad, Brown and confident.

"Blackberries, of course, are best; What do you say, Grace?" And the little lass replied, "That's, of course, the case!" But above them sang a bird

In a mocking tongue,

"Wait a little longer, dears,
You are rather young.
Birds who know a thing or two
Well may tell you this—
Blackberries are very good,
Flavored with a kiss,"

The evening was warm and still, and all the doors and windows in George street were set open, and everybody who could escape from in-door occupation was out for a stroll. The people living here were decent, hard-working men and women, earning enough to keep their families in comfort, and taking an honest pride in themselves and their dwellings. Most of the windows could boast of clean muslin curtains, and the doorsteps were as white as hard scouring

pride, but not less to move one's pity, to observe the commotion in business cir cles in Switzerland, as the reports of the Swiss Commissioners to the Philadelphia Exhibition were made public. Affairs were not in a cheerful state at that time. The "hard times" that had begun in America were already sorely felt in the center of Europe. Production was slackened in all the factories, and the values of many favorite investments had shrunk to one-half. When the report of M. Favre-Perret on American watchmaking was read to crowded meetings of watchmakers at Neuchatel and Geneva the general impression was that of ab-ject despair. Work was suspended for months on the costly building of the School of Watchmaking founded by the

The production of the Swiss dairies is prized in all the markets of Europe. William scarcely knew how he returned the gentleman's salutation. A moment more and Walter Fenwick and de Vand informed his associates to what his wife had passed on, leaving William to collect his scattered senses. Both had seen plainly that he was far too confused to what extent the dairy productions of the great establishments of the Northern States and Canada. and Canada were overflowing the home market. "There are thousands of these establishments," he said, "with capital amounting to \$25,000,000, already producing to the amount of \$31,000,000 annually. The export of cheese was 38,000,000 pounds in 1863, and 96,000,000 pounds in 1874. The export of butter has grown to 52,000,000 pounds a year. The competition is getting formidable, for the manufacture of cheese has been

If this were all, or nearly all, it would be an easy matter to im-port or to imitate the machinery—there are no patent laws in Switzerland-and, by combining capital in great establishments, to go on with their business with the double advantage of the low wages and abundant skilled labor of the Old World and the organization and appli-

one eminent American house, however, with ample capital, had made this hopeful but expensive experiment. The finest business edifice in Geneva was built, three or four years ago, by Amer-icans, and stocked with the best American watch-making machinery. The most skillful Geneva watchmakers were sought for at high wages—high, that is, for Switzerland, but low for America—and the world looked for a splendid success. But the beautiful building is now let out in lodgings, and the machines are ad-vertised for sale. Evidently the secret

I have followed the conjectures and proposals of the Swiss newspapers on this point with great interest. They de mand patent laws for the encouragement of invention, schools of technical instruction for artisans, relief from the inter-ruption of work by militia service, and other Governmental palliatives; but they do not touch the main point of the su-periority of the American manufactories, and that is the personal superiority of the American workman.

The secret is revealed in an extraordinary pamphlet by M. Bally, whom we have already quoted, and who is the proprietor of the great boot and shoe factory at Shoenenwerth, in German Switzerland. The pamphlet is printed both in German and French, and has made a profound impression abroad. It gives, will not say the impressions, but the He was taken to a small grove near the city, and, without giving him time for prayer or entreaty, they swung him from States during the Centennial year. The poetry of motion may be seen in two ways at one and the same time. Just watch a bald-headed man in church. To look at him you would think his whole being was absorbed in wrestling with those great problems of theology that the preacher is rolling in upon him like a flood, but it is not so; look closely, and you will see the set teeth, the cocked eye, and vengeance standing out upon his brow. He knows that a fly has been shinning for the last five minutes back and forth and all over his head, but can find no resting place for the sole of his foot. Suddenly as the lightning's flash his hand is describing a circle in the air, and the fly is gracefully making a straight line to further conquests in the other aisle - Yonkers Gazette.

Then bring the split up together, twine the two small limbs together and secure them. The limbs will grow together in time, and keep the split from opening."

Concrete walls do not give satisfaction. There are so many conditions, such as expanding, contracting, etc., that cannot be exactly determined, that they are very apt to settle out of perpendicular, or crack, or in some way fail to make a perfect job. Stone and brick are more reliable.—Rural Home.

SUEL FOSTER furnishes facts in relation to the superior advantages of using stocks of the Siberian crab for grafting apples. Some Western nurserymen plant the seeds of the crab for this purpose, and The following statement is made from the returns to the Secretary of State by the Supervisors, the information being collected by them at the time they took the assessment last spring. easily excited, shy or wild. In the latter the waste of material is considerably larger, the equilibrium between the organic processes is easily disturbed, and the animal, therefore, more predisposed to disease. Every farmer knows that a horse, for instance, which is quiet and docile needs less food, keeps better, is docile needs less 100d, keeps better, is able to do more work, and is usually also healthier, than one that is always restless, easily excited or wild. Still, spirit and strength must not be mistaken for an excitable temperament. An animal may be spirited and be very docile and quiet.—Chicago Tribune.

An orehard of Northern Spy apples contains about four acres, and is a hog and sheep pasture. It is well seeded in grass, yields a great deal of pasture, and is the first orchard that we have seen this year with anything like a crop of apples. Two years ago we saw it, and it was heavily loaded with apples. Last year Mr. H. said it bore a light crop, and this year about two-thirds of the trees, we should think, are fairly filled with appless same of them landed on Inaddition a little manure is scattered over the surface annually. RULES FOR THE SICK-ROOM.—(1.) Bring in fresh flowers or something new every day; even the commonest green thing is better than nothing. (2.) Don't talk about anything unpleasant. Talk about something that will lead the patient's thoughts away from his aches and pains, and leave him in a cheerful and restful state of mind. (3.) Follow the 1,396 doctor's directions implicitly. (4.) Never ask a sick person what he wants to eat.

If he asks for anything that will not injure him, get it if you can. Never bring him much at a time. A little bit in a 2,490 dainty dish will sometimes tempt the separate when a large quantity would a cause nausea. (5.) Expect sick persons to be unreasonable. KILLED BY LIGHTNING .- During the heavy thunder storm of Tuesday evening last John G. Miller, a middle aged man, and an old man named Rudolph L. Green, took shelter under a tree about a mile east of Northfield Catholic Church. The tree was struck by lightning, the fluid passing down Miller's back, left hip and leg, tearing the buckle from his left shoe, discoloring the back, hip, and leg in large spots. The fluid passed downward from Green's breast, across his abdomen, and down his right leg. An old man standing under a vass of the city for subscriptions.

In addition to the direct trade of these four rich and populous counties, I think it safe to estimate that at least one-fourth of the entire rade of Central and North-Western Michigan, south of Saginaw, and north of the southern tier of counties through which the Lake Shore and Michigan Southern passes, will naturally eek a market at Toledo, by way of the Tolelo and Ann Arbor Railroad and its connecions, instead of going as they do now to De-

The wholesale and retail merchants of Toledo, and the farmers along the line as well, ought to give prompt and practical encouragement to this proposed new road, as it facilitates and cheapens the transit of all farm products to Toledo, and opens up a trade through hat part of Michigan, in which Toledo is tolay without a customer.

The four counties through which the new road will pass, Shiawassee, Livingston, Washtenaw, and Monroe, produced in 1870, as follows, I quote from the United States census of

THE MOONS OF MARS.

A Highly Important Astronomical Discovery

[From the New York Tribune.] A discovery that will rank among the most important in astronomy has just been made at Washington, by Prof. Asaph Hall. The planet Mars, since the invention of the telescope, proved more convenient for examination, and there is more known about it than any other celestial object, not even excepting the moon, since of that only one side is ever turned toward us. Venus, though nearer us than Mars, is never seen to as great advantage. All who have studied the characteristics of Mars. have been struck by its similarity in many particulars to the earth; such as having continents and seas; frozen poles where the progress of winter and summer can be alternately traced; a day of about the same length as ours; an at-mosphere over portions of which clouds are flitting. There are many things about which we can differ, such as business and secular affairs without disas business and secular affairs, without discussing our political differences. Now we are agreed as Americans, I think, that all parts of the constitution shall be obeyed, parts that are new as well as parts that are old; that if will be a grand thing to dwell together in unity. We have disagreed in the past. Through the evils of war the country was borne; but these things are past. Let us have a brief period, at least, of perfect harmony and unity. We have with us a few people who are associated with me in office—Secretary Evarts, Atty. Gen. Devens and Postmaster Gen. Key. I don't see that you make much difference in these people, although the last had the bad taste to vote against me, and this is his first visit North; as business and secular affairs, without dispeople of all parts of the country, both North and South. my piace for the last hour. I he needs no substitute, my friends, there or elsewhere. He has already demonstrated to the satisfaction of the people of the States his high capacity as the official head of the nation. With firmness and patriotism faithfully meeting every duty devolving upon him, and with the simple ambition to make the American name throughout the world the representative of freedom, hention to make the American name throughout the world the representative of freedom, honesty, peace and unity. Sprung from New England loins, he inherited a patriotism which your John Stark took to the field of Bennington with him 100 years ago, and its fruitage shall be seen in the administration which shall be marked in the future of the country as an epoch of high advancement in the art of true and just government. As for the Vice President, he is in full accord with the President in these purposes. His highest boast, too, is that he is of good old New England stock. He trusts that he has inherited something of its patriotism, and something of the principles patriotism, and something of the principles which have placed this nation in the van of na-tions, and which, by the help of God, shall keep it there, until it shall lift up to the eyes of the world the standard of true, enlighter Depredations Upon the Timber Lands. A RECENT Washington dispatch says:

"The late news from Spain is that the failure to subdue the insurrection in Cuba is manly due to corruption, incompetency and maladministration on the part of the Spanish officials, but there are no indications that Spain has any intensition of abundoning the contest, or that she fears outsiders. It is probable that the present Spanish Ministry intends to make a formulable effort to subdue the insurgents in the coming fall campaign.
